

Dictation & Communication Systems Sales and Service

Simple steps to make your digital recorder work best with Dragon Voice Recognition

1. Install the Digital dictation software (we recommend Philips 9600 or Olympus DS 5000 recorders).
2. Install Dragon Voice Recognition (DVR)
3. Check for updates
4. Train DVR with the digital recorder
5. Read from a word document for further training.
6. Download and printout 'Command reference guide' from our website to help you dictate.
7. Dictate via digital recorder.
8. Download and run via DVR.

When you do purchase DVR software from PC Dictation we recommend an install and support package. This will take all the guess work out of installing and training.
